

Space Science and Technology (SST) Test

This document provides key information regarding the upcoming SST Test for all applicants.

Test Date & Time: February 2nd, 2025, 11:00 AM onwards (60 minutes duration)

Frequently Asked Questions:

1. What is the SST Test?

The SST Test is an online exam designed to evaluate your understanding of space science, problem-solving skills, and aptitude for the program. It is a crucial part of the application process.

2. How is the SST Test structured?

The test consists of four sections:

- **Section 1:** Personal Information (Gathers basic applicant details.)
- **Section 2:** Applicant Skills (May inquire about relevant skills and experiences.)
- **Section 3:** Aptitude Test (Assesses logical thinking, mathematical reasoning, and general problem-solving abilities.)
- **Section 4:** Space Science and Technology Test (Focuses on your knowledge of space science and technology.)

3. What topics will be covered in the SST Test?

The questions will primarily focus on the space sector and will test the candidate's knowledge of recent developments, general space science concepts, and problem-solving abilities related to space exploration. There will be questions that assess logical thinking, mathematical reasoning, and general problem-solving abilities.

4. How should I prepare for the SST Test?

To prepare effectively, we recommend the following:

- Familiarize yourself with recent advancements in space science and technology.
- Review general aptitude problems, including logical reasoning and mathematical questions.
- Practice space-related numerical and reasoning problems.
- Stay updated on space news and current events. This will be particularly helpful for the Space Science and Technology Test section.
