

Climate Smart Innovation (CSI) 2024-25

An opportunity for industry innovators to showcase their innovations that address climate change mitigation or adaptation relevant to the building sector.

Climate Smart Innovation (CSI) is a platform to connect startups working on climate tech innovation for the building sector, with investors, and potential customers. The CSI exhibition and pitches are held at the [Solar Decathlon India](#) (SDI) Finals attended by 800 people, where these innovators also inspire the next generation of students and connect with leading practitioners from the design, construction, and real estate industry. The innovations on display have ranged from new, low-carbon building materials to technology that captures water from the atmosphere.

Participants get the opportunity to interact with and present their solution/s to potential investors, real estate developers, incubators, accelerators, leading industry practitioners, media, faculty, and students and boost visibility and outreach to reach a wider audience of industry professionals and potential collaborators.

The Climate Smart Innovation Exhibition and Award are conducted as a part of Solar Decathlon India, the World's Largest Net-Zero Building Challenge, conducted by the Alliance for an Energy Efficient Economy (AEEE) and the Indian Institute for Human Settlements (IIHS) under the aegis of the Indo-US Science and Technology Forum (IUSSTF).
